Dear Mr. McConihe:

Our review of the tentative drawings, submitted by Harrison & Abramovitz on 8 August for our new headquarters building at Langley, Virginia, has been completed in close collaboration with representatives of your Service.

At the conclusion of the Project Directive meeting with architect-engineer representatives, which the Public Buildings Service held on 9 and 10 September, it was decided that the directions, suggestions and questions to be presented to the architect-engineer would be prepared by the PBS and would include the comments of this Agency. We have reviewed this material in draft form and find it to be satisfactory. In addition, we have prepared several sets of drawings for the purpose of illustrating requirements that could better be shown graphically than in writing. Duplicate sets of prints are enclosed of the following:

1. Agency partition layout, all floors.
2. Alarms and detection devices.
3. Heavy live loads (floor loads exceeding normal)

4. Space groupings for air conditioning.

Subject to the revisions or corrections indicated on the above plans and to the material prepared by PBS, it is recommended that you approve the tentative drawings and instruct the architect-engineer to proceed with preliminary working drawings.

Sincerely,

LSI

L. K. White
Deputy Director
